

Pier Boot™

PIER BOOTS™ are made of durable, noncorrosive plastic and are available for 3" and 6" cover.

3PB PIER BOOTS™ are designed to support a reinforcing steel cage within a drilled shaft with a 3" concrete cover requirement and fit rebar sizes #5 through #14.

6PB PIER BOOT™ are designed to support a reinforcing steel cage within a drilled shaft with a 6" concrete cover requirement and fit rebar sizes #6 through #14.

Faulty placement of the cage may cause foundation failure, which often leads to issues of contingent liability. Because the rebar cage cannot be inspected or tested after the concrete is placed in the drilled shaft, the cage must be properly supported at the outset.

PIER BOOTS™ are also great for supporting reinforcing steel over waterproofing, in mat foundations and providing vertical support of slurry walls.

INSTALLATION:

Installation is accomplished in seconds by simply pushing the **PIER BOOT™** onto the end of a vertical bar of the rebar cage. The recommended spacing for installation is one **PIER BOOT™** on every other vertical bar for piers under 48 inches in diameter or one **PIER BOOT™** on every vertical bar for piers 48 inches in diameter and over.

Part No.	Description
3PB	3" Pier Boot™ : 3 inches of concrete cover fits rebar sizes #5 thru #14
6PB	6" Pier Boot™ : 6 inches of concrete cover fits rebar sizes #6 thru #14
